

## **SPECIFICATION AMENDMENTS**

Please amend the specification in the paragraph starting on page 6, line 30, and running through page 7, line 6, to read as follows:

Although the body 102 is illustrated in Figures 1A-E as having a rectangular closed cross-section, the body 102 may alternatively be formed in other shapes including a body having an oval, round or square-section. The channel 108 is also illustrated in Figures 1A-E as having a rectangular cross-section and may also be formed in other shapes, not necessarily the same shape as the body 102. Similarly, although the first, second, and third conduits 110, 112, 114 are illustrated as having round cross-sections, they too may be independently formed in other shapes.

Please amend the paragraph on page 7, lines 7-11, to read as follows:

In the embodiment illustrated in Figures 1A-E, the first and second conduits 110, 112, are formed within the body 102 and the third conduit 114 is formed within the channel 108. Alternatively, each conduit 110, 112, 114 may be formed either within the body 102, within the channel 108, or partially within the body 102 and partially within the channel 108.  
The first, second and third conduits each may have an internal diameter between 2 mm and 5 mm.
